| Functional inadequacy of the musculoskeletal system, congenital or acquired, incompatible with the contact or skill demands of the sport | X | X | X | |
| NEUROLOGICAL: History of symptoms of previous serious head trauma or repeated concussions | X | | | |
| Controlled convulsive disorder # | | | | |
| Convulsive disorder not moderately well controlled by medication | X | | | |
| Previous surgery on head | X | X | | |
| RENAL: Absence of one kidney | X | X | | |
| Renal disease | X | X | X | X |
| GENITALIA: Absence of one testicle/Undescended testicle | | | | |

COLLISION: Football, Rugby, Hockey, Lacrosse, etc
 CONTACT: Baseball, Soccer, Basketball, Wrestling, Water Polo, etc.
 NON-CONTACT: Cross Country, Track, Tennis, Crew, Swimming, etc
 OTHER: Bowling, Golf, Field Events, Archery, etc.

*Each patient should be judged on an individual basis in conjunction with this cardiologist and operating surgeon.

** Each person should be judged on a individual basis. All things being equal, it is probably to encourage a young boy or girl to participate in a non-contact sport rather than a contact sport. However, if a particular patient has a great desire to play a contact sport, and this is deemed a major ameliorating factor in his/her adjustment to school, associates and the seizure disorder, serious consideration should be given to letting him/her participate if the seizures are moderately well controlled or that the athlete is under good medical management.

*** The Committee approves the concept of contact sports participation for youths with only one testicle or with an undescended testicle (s), except in specific cases such as an inguinal canal undescended testicle (s) following appropriate medical evaluation to rule out unusual injury risk. However, the athlete’s parents and school authorities should be fully informed that participation in contact sports for such youths with only one testicle does carry a slight injury risk to the remaining healthy testicle. Following such an injury, fertility may be adversely affected. But the chances of an injury to a descended testicle are rare, and the injury risk can be further substantially minimized with an athletic supporter and protective device.
